^a The numbers in this table have been rounded for presentation purposes. As a result, the reductions might not reflect the exact difference of the values in all cases. This analysis was simulated using the same methodology as reported in Section 5.3; however, it includes only emissions changes for passenger cars.

^b The values for global mean surface temperature and sea-level rise are relative to the average of the years 1986–2005.

^c Temperature changes reported as 0.000 are more than zero but less than 0.001.

^d Sea-level rise changes reported as 0.00 are more than zero but less than 0.01.

^e Ocean Acidification changes reported as 0.0000 are less than zero but more than -0.0001.

CO₂ = carbon dioxide; C = degrees Celsius; ppm = parts per million; cm = centimeters; GCAM = Global Change Assessment Model.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.

^a Nonattainment or maintenance status as of 4/20/2021. Source: EPA. 2021. The Green Book Nonattainment Areas for Criteria Pollutants; <http://www.epa.gov/airquality/greenbook/>. "--" indicates that no severity classification has been established for the NAAQS pollutant.

^b Emissions thresholds in tons per year. Where the threshold differs by precursor pollutant, the smallest of the precursor thresholds is shown. These thresholds are provided for information only; a general conformity determination is not required for the Proposed Action. Source: 40 CFR 93.853.

^c Positive values are emissions increases; negative values are emissions decreases.

NAAQS = National Ambient Air Quality Standard; CO = carbon monoxide; NO₂ = nitrogen dioxide; PM2.5 = particulate matter less than 2.5 microns in size; PM10 = particulate matter less than 10 microns in size; SO₂ = sulfur dioxide; ppm = parts per million.
